

# 10KW solar panel for home use

## Overview

---

Should I get a 10kW solar panel system?

When you're thinking of getting a solar panel system, you want to ensure it matches your home's requirements. A 10kW solar panel system is a great choice if you have a high-consumption household – or if you can afford to maximise your investment by using more roof space.

What is a 10kW Solar System?

You might also see a 10kW solar panel system referred to as a 10kWp (kilowatt peak) system. In this context, there's no difference between the two. How many solar panels are in a 10kW system?

The number of solar panels in a 10kW system depends on the power rating of the panels themselves.

Is a 10kW solar energy system enough to power a home?

When asked to recommend a properly sized solar energy system for an average-sized home, many installation experts will suggest a 10-kilowatt (kW) system as their default answer. But is a solar array with this capacity really good enough for the typical home?

How many solar panels are in a 10kW system?

The number of solar panels in a 10kW system depends on the power rating of the panels themselves. If you're using 400W panels, they'll each generate 400 watt-hours in standard test conditions. If you get 25 of these 400W panels installed on your roof, you'll have a 10kW system, which produces 10,000kWh per year in these conditions.
