

## **2 5 kw solar inverter factory in New-Zealand**

## Overview

---

Do solar panels need an inverter?

These are made up of photovoltaic (PV) cells, which collect light from the sun and convert it into DC current. To make this power produced by the solar panels usable, an inverter is required. In short, an inverter is an electronic device that converts the DC power generated by the solar panels into AC power at the correct voltage for the grid.

What does a solar inverter do?

Inverters are the 'brains' of your solar power system. Their primary function is to convert the direct current (DC) output into alternating current (AC) – AC is the standard used by all home appliances. And just like solar panels, not all inverters are built the same.

Is the list of solar panel manufacturing locations accurate in Q3 2024?

The list is accurate as of Q3 2024 and will be updated in real time as news about facility openings and closings is released. Please also check out our list of U.S. solar panel manufacturing locations [here](#).

What is the rated energy of a battery inverter?

\*1: Test conditions, Cell Voltage 2.5 ~ 3.65V, 0.5C charge & discharge at +25 ±2°C for battery system at beginning life. System Usable Energy may vary with different inverter. Rated Energy\*: Test conditions, Cell Voltage 2.5~3.65V, 0.5C charge & discharge at +25±3 °C. Usable Energy\*: Test conditions, 90% DOD, 0.5C charge & discharge at +25±3 °C.
