# 5g base station communication cabinet installation

## Overview

---

How can a 5G base station be truly global?

To develop truly global 5G coverage, base stations will need to be installed across the world in some extremely inhospitable environments. This means that the new generation of base stations needs to be designed with environmental challenges and extreme weather in mind, such as the effects of humidity, heat and wind.

Should a 5G base station be able to withstand a hot climate?

Both the 5G cells and the base station should remain functional even when subjected to severely wet and humid conditions. Even in extremely hot climates, 5G components must remain reliable, stable and energy efficient to prevent downtime, malfunctions and reduction in lifespan.

Will a 4G base station be upgraded to a 5G network?

ation components and antenna mast systems. Upgrading 4G base stations by software to non-standalone (N/A) 5G will still require hardware changes. It will act as an interim, but it will still not satisfy the need for true 5G network architecture. The number of base stations needed increases with each generation of mobile technology.

Why do we need a True 5G network architecture?

the need for true 5G network architecture. The number of base stations needed increases with each generation of mobile technology to support higher levels of data traffic. Antenna systems will also need to evolve to handle increases in capacity, frequency ranges and the ability to minim
