

# Add a generator to the solar power station

## Overview

---

### How to combine solar panels with a generator?

An inverter is key to combining solar panels and a generator. It changes the solar power from DC to AC. This makes it usable for your home appliances. Choose an inverter that can handle the power from both sources. Connect the solar panels to the inverter first. After that, link the generator to the inverter.

### How do you use a solar power generator?

Solar power generator solar panels are smaller and more portable than on-grid solar system panels, so you can move them around later on fairly easily if you need to. Plug your batteries into the charge controller. Connect the positive and negative cables from the batteries to the positive and negative terminals on the charge controller.

### How do I get help installing a solar generator?

If you opt for an EcoFlow solar generator solution, the EcoFlow Support page will help connect you to someone who can help you get up and running or to professional installers (if required). You can also find EcoFlow product manuals and setup guides available for free online. A solar generator prepares you for power outages.

### How does a generator work with solar panels?

A generator works with solar panels by providing backup power when solar energy is insufficient. It ensures continuous electricity supply during cloudy days or at night. The system switches between solar panels and the generator automatically, maintaining power flow without interruption.
