Arc flash switchgear for sale in Brasilia

Overview

What is arc resistant switchgear?

Unlike conventional switchgear, arc-resistant switchgear is designed with reinforced compartments that can withstand incredible pressure increases during high-energy arc faults. Arc-resistant switchgear offers a safe, proven, and cost-effective solution to the problem of arc flash events. Why do I need Arc-Resistant Switchgear?

What is arc-resistant switchgear?

Because arc-resistant switchgear is specifically designed to contain and limit the damage incurred from internal arc faults, it provides the highest degree of protection to personnel, long-term savings, and a significant reduction in downtime.

What is an arc flash?

According to the National Fire Protection Association (NFPA®), an arc flash occurs “when an electric current passes through air between ungrounded conductors or between ungrounded conductors and grounded conductors.” Temperatures can reach 35,000 °F— three times hotter than the temperature of the sun.

Does Eaton offer arc flash protection?

Eaton has retrofit solutions to replace or modify (or low voltage as appropriate), which result in a system that provides superior arc flash protection at the transformer secondary. This solution is especially useful for installations that do not use a secondary main (NEC 6-disconnect rule).
