

# Argentina Communication Network Base Station Construction Project

## Overview

---

Why is China launching a deep space station in Argentina?

Officially, the Deep Space Station operated by China in Argentina is primarily intended to “support activities such as interplanetary exploration, astronomical observation, and satellite tracking and control in orbit.” However, the facility raises concerns both domestically and regarding security in the United States.

Why is China limiting Argentina's control over the Neuquén Station?

The regulatory environment surrounding the Neuquén station has granted China considerable autonomy, effectively limiting Argentina's oversight capabilities. Operational clauses of the agreements provided China with sweeping rights and privileges, essentially granting it near-sovereign control over the facility.

Who facilitated the construction of China's Space Station?

The two agreements that facilitated the construction of the complex were signed in 2012: one between the China Satellite Launch, Tracking, and Control General (CLTC) and the National Commission on Space Activities (CONAE) of Argentina, and the other between the Chinese entity and the province of Neuquén.

Why is Argentine infrastructure a major constraint?

Infrastructure/Construction As a geographically large country with widely distributed population centers, Argentina has substantial needs to increase and improve infrastructure. A major constraint is a lack of investment in and financing of such large projects. The Argentine government plays a prominent role in the infrastructure sector.
