

# Average power of solar panels in winter

## Overview

---

Do solar panels work in winter?

It's a common myth that solar panels don't work during winter. Interestingly, cold temperatures typically improve solar panel output, which means your panels will produce more power for each precious hour of sunshine during the short days of winter. Solar panels work by turning sunlight into electricity.

Are solar panels more efficient in winter?

Solar panels generate more electricity during the summer since the days are longer, so they get more sunlight hours. In terms of efficiency, panels are more efficient during winter but generate less power due to shorter days. Do you have to clear snow off solar panels?

.

How much electricity does a solar panel produce in winter?

According to our calculations, solar panel output decreases by around 83% in the winter compared to the summer. To give an idea of what that means, a standard 3.5 kilowatt (kW) solar panel system will produce around 362-kilowatt hours (kWh) of electricity per month during the summer. In winter, that drops to 52 kWh.

How does winter affect solar energy performance?

Winter generation can drop to 15.0% of that seen in peak-summer. Solar panels need light, not heat, to perform. Cold weather improves efficiency by enhancing conductivity and reducing thermal losses. Snow can boost performance through light reflection but heavy snow can hamper performance.
