

Bangkok energy storage ground solar power generation

Overview

Are there grid-scale energy storage projects in Thailand?

There are currently few grid-scale energy storage projects in Thailand, although the situation is likely to change. In furtherance of its commitments under the Paris Agreement, the Thai government has enacted policies which envisage renewable energy accounting for the majority of grid capacity and output by 2040.

Why is Thailand relying on more than just solar?

To close this gap, Thailand is relying on more than just solar. The government's Alternative Energy Development Plan (AEDP) promotes energy diversification, including storage systems and emerging technologies like green hydrogen. These strategies are designed to not only boost generation capacity but also ensure energy stability and resilience.

What is the cheapest source of bulk electricity generation in Thailand?

Utility-scale solar is the cheapest source of bulk electricity generation in Thailand. The LCOE for solar in Thailand has declined sharply since 2019, thanks to falling solar equipment prices and increased deployment in the country.

What's going on with rooftop solar in Thailand?

Rooftop solar is also expanding fast, with the quota for public installations rising from 50 MW to 200 MW, plus an additional 50 MW dedicated to Bangkok. These changes reflect not just ambition, but momentum. Read Also: [The Promise of Thailand Renewable Energy Initiatives](#)
