

# Castries Communication Operator Base Station

## Overview

---

What is a base station in a telecommunications network?

A base station is a critical component in a telecommunications network. A fixed transceiver that acts as the central communication hub for one or more wireless mobile client devices. In the context of cellular networks, it facilitates wireless communication between mobile devices and the core network.

What is a mobile base station?

A mobile base station, also called a base transceiver station (BTS), is a fixed radio transceiver in any mobile communication network or wide area network (WAN). The base station connects mobile devices to the network and routes them to other terminals in the network or to the core network of a mobile operator. Read more [Explore Mobile base](#).

How important is base station operation?

These results indicate that base station operation can help operators efficiently build networks and effectively shorten the ROI period. According to Huawei's Wireless Network Market Insight statistics, global mobile operators have a total of about 6 million physical base stations.

What are base stations used for?

In addition to supporting traditional mobile communication, base stations also play a vital role in two-way radio systems such as citizens band (CB) radio and ham radio. These fixed base stations are commonly used by dispatchers to communicate directly with multiple mobile operators in the field.
