

Comparison of High-Efficiency Sales of Foldable Containerized Machines and Diesel Power Generation

Overview

How will foldable containers affect exporters?

Despite the increase in operational complexity, one foreseeable impact of foldable containers is that the availability of empty containers for exporters should logically improve, since carriers would find it cheaper to rebalance stocks of foldable containers between IPI locations, as represented in Leg F of Fig. 2.

What are the benefits of foldable containers?

The purported benefits of foldable containers are numerous (if not yet proven). They are said to be able to not just reduce transportation costs, congestion and carbon footprint, but also alleviate space constraints at seaports (e.g. Konings and Thijs, 2001, Bandara et al., 2015).

Can foldable Containers save money?

One study suggests that foldable containers could result in a 50% reduction (25 million TEUs) of total volume of empty containers shipped globally per annum in 2010, equating to over US\$1000 savings per empty container (Boile et al., 2004).

How many foldable containers are needed for the Inland network?

Out of a total of about 5000 containers, an estimated fleet and critical mass of just 695 foldable containers are required for the inland network under study (and the rest of the containers being conventional ones), with a 71% load factor on the back haul.
