

# Container Freezer Generator

## Overview

---

What type of generator is used for refrigerated shipping containers?

- Diesel generators: Diesel generators are the most common type of generator used for refrigerated shipping containers. They are reliable, durable, and can provide a lot of power. However, diesel generators can be noisy and expensive to operate.

How to choose a generator for a refrigerated shipping container?

Diesel, gasoline, and natural gas are good options. Generators can be really loud, so picking one with a low noise level is key. This is even more important if the generator is going to be used in your neighborhood. If you need to move your refrigerated shipping container around, it's best to go for a generator that comes with wheels.

What type of generator should you use for a freezer?

It is possible to use a generator to run a freezer. Generally, a 3000-watt generator will be able to provide a backup power supply to the freezer during a power surge or power outage and run the freezer with efficient performance. However, you should always choose the right type of generator.

Can a generator power a freezer?

Also, make sure your generator's electrical cord is free from tears or cuts. In addition to powering your freezer, never attempt to provide power to your entire house by plugging your generator into an electrical outlet. This is extremely dangerous and presents a high risk of electrocution.

## Container Freezer Generator
