What is network security in containerized environments?

Network security in containerized environments involves securing the communication between containers and external entities. This includes implementing network policies to control traffic flow and using encryption to protect data in transit.

What is a bastion+ network stack?

484 In terms of inter-container communications across hosts 485 (nodes), a specialized Bastion+ network stack is utilized at the 486 external interface of each node, conducting a secure forward-487 ing from the external interface to destination containers as all 488 security decisions are already made at each container.

Is Bastion+ a secure inter-container communication bridge?

Tripwire's 38 container security report found that 60% of organiza- 39 tions already had experiences of security incidents in 2018, 40 8 architectural limitations.
