

# Cost Analysis of Wind-Resistant Mobile Energy Storage Containers for Mountainous Areas

## Overview

---

What are the different types of mobile energy storage technologies?

Demand and types of mobile energy storage technologies (A) Global primary energy consumption including traditional biomass, coal, oil, gas, nuclear, hydropower, wind, solar, biofuels, and other renewables in 2021 (data from Our World in Data 2). (B) Monthly duration of average wind and solar energy in the U.K. from 2018 to 2020.

What challenges does the energy storage sector face?

The energy storage sector faces challenges such as limited capacity and high upfront costs, as highlighted in the cost analysis for energy storage. However, it is also buoyed by opportunities in the electric vehicle market and technological advancements.

Is wind energy based on capacity factors & construction cost?

The statistic of wind energy in the US is presently based on annual average capacity factors, and construction cost (CAPEX). This approach suffers from one major downfall, as it does not include any parameter describing the variability of the wind energy generation.

How much does a distributed wind energy system cost?

The residential and commercial reference distributed wind system LCOE are estimated at \$240/MWh and \$174/MWh, respectively. Single-variable sensitivity analysis for the representative systems is presented in the 2019 Cost of Wind Energy Review (Stehly, Beiter, and Duffy 2020). Analysts included the LCOE estimate for a large distributed wind energy
