Cost-effectiveness of imported energy storage batteries

Overview

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.

Is battery energy storage a competitive advantage?

The results show that battery energy storage is almost in an absolute advantage when the duration is <2 h, thermal energy storage has a strong competitiveness when the duration is 2.3–8 h, and Pumped storage gains economic advantages from 2.3 h, and dominates from 7.8 h and beyond.

What happened to battery energy storage systems in Germany?

Small-scale lithium-ion residential battery systems in the German market suggest that between 2014 and 2020, battery energy storage systems (BESS) prices fell by 71%, to USD 776/kWh.

What is the investment cost of an energy storage system?

The investment cost of an energy storage system primarily refers to its initial investment cost. Although energy storage systems differ greatly due to their different principles and forms, it is still possible to distinguish the devices involved in an energy storage system by power components and energy storage media.
