

# **Cost of Waterproof Photovoltaic Containers for Middle Eastern Mines**

## Overview

---

Is the Middle East a good place to invest in solar energy?

Account for 95% of global renewable expansion by 2028. The Middle East's potential  
The Middle East, being a region blessed with high solar irradiance, brims with much potential for solar energy. Receiving over 2,000 kWh/m<sup>2</sup> annually in solar irradiation and benefiting from an 89% drop in solar generation costs since 2010, the region could leverage.

Should solar PV be installed in mining areas?

If future PV projects continue to follow current land-use patterns at the country level under a business-as-usual scenario, then installing solar PV systems on 65,488 km<sup>2</sup> of global mining areas could prevent the occupation of 28,311 km<sup>2</sup> of cropland for solar development.

Why is solar energy important in the Middle East?

with many benefits — light, warmth, and the energy needed to power our world. In the Middle East and around the globe, solar energy has become a pillar of many renewable energy strategies. Solar photovoltaic (PV) technology, in particular, is deemed critical in hitting energy targets. GI.

How much electricity can MPV systems generate in a mining area?

Our findings indicate that, within a global mining area of 65,488 km<sup>2</sup> with slopes less than 3°, MPV systems could generate 12,373 TWh of electricity annually from 8,670 GW of installed panels worldwide (Table S1).
