Curtain wall double glass components

Overview

What are structural glazed curtain wall systems?

Structural glazed curtain wall systems are a type of unitized system that is structurally self-supporting. They are made from large glass panels held in place by structural silicone joints, providing a seamless and uninterrupted view of the outside environment.

What are glass curtain walls?

Glass curtain walls are lightweight aluminum-framed facades housing glass panels. These glazing systems don't support the weight of a roof or floor. Instead, gravity loads and wind resistance transfer from the surface to the building's floor line. Curtain walls are often part of a building envelope or comprises one part of a wall system.

What are the different types of curtain wall systems?

This system typically consists of vertical mullions\, horizontal transoms\, and glass or opaque panels. There are several types of curtain wall systems available\, each with its own unique characteristics and advantages. The four most common types of curtain wall systems are stick-built\, unitized\, semi-unitized\, and structural glazing.

What are the different types of glass curtain wall?

There are 2 main categories of glass curtain wall if we look at their fabrication and installation methods: stick systems and unitized (or modular) systems. A frame is assembled on-site using mullions, transoms, and glass or opaque panels (potentially glass spandrels), which are designed to fit together as a unitized system.
