

LOTWA SYSTEM

# Cyprus High Frequency Uninterruptible Power Supply Plant

## Overview

---

Why is Cyprus relying on electricity during night hours?

The Republic of Cyprus's electricity supply faces severe strain during evening hours as power plant failures and ongoing maintenance work continue to plague the national grid, forcing reliance on emergency supplies from the occupied north and renewable sources.

How does Cyprus generate electricity?

Cyprus is an island with no indigenous hydrocarbon energy sources. This means that its power generation system operates in isolation and totally relies on imported fuels for electricity generation. Currently, the primary imported fuel used in electricity generation is heavy fuel oil and gasoil.

How many megawatts can a power plant generate in Cyprus?

The Cyprus Transmission System Operator reported maximum available generation from the Electricity Authority of Cyprus (EAC) units at 1,023 megawatts yesterday evening. However, an additional malfunction at the Dhekelia power station reduced system capacity by 60 megawatts, creating a precarious situation.

How does Cyprus power generation work?

This means that its power generation system operates in isolation and totally relies on imported fuels for electricity generation. Currently, the primary imported fuel used in electricity generation is heavy fuel oil and gasoil. Cyprus power generation system consists of three thermal power stations with a total installed capacity of 1480MWe.
