

# Do solar panels produce cells

## Overview

---

Why do solar cells work?

Solar cells work because of the photovoltaic effect — and it's nothing new! First discovered in 1839, the photovoltaic effect is what makes solar panels and solar power systems of any size work. Without the photovoltaic effect, there would be no such thing as solar-generated electricity. (Source: Energy Education) Solar cells capture sunlight.

How do solar cells produce electricity?

When sunlight strikes the cell, it generates an electric current by knocking electrons loose from atoms within the material. Multiple solar cells are combined to form a solar panel, which can produce a substantial amount of solar electricity. Why is Solar Cell Called a “ Cell “?

.

How do solar photovoltaic cells work?

Solar photovoltaic cells are grouped in panels, and panels can be grouped into arrays of different sizes to power water pumps, power individual homes, or provide utility-scale electricity generation. Source: National Renewable Energy Laboratory (copyrighted).

What are solar cells?

Solar cells, also known as photovoltaic (PV) cells, are semiconductor devices that convert sunlight directly into electricity. This process is known as photovoltaic effect. Solar energy has now become extremely popular because it is sustainable and renewable and has very low impact on environment.
