## Overview

---

### Do inverters need batteries?

For most residential and small commercial setups, the traditional battery and power inverter combo is the preferred choice to ensure continuous power supply during blackouts. So, while some inverter types do not require batteries, if your priority is uninterrupted backup power, investing in a quality battery in inverter system is essential.

### Does a solar inverter work with a battery?

When incorporating a battery, the inverter must manage energy from both the panels and the battery storage. Not all inverters are equipped to handle this dual function. An inverter converts DC electricity from solar panels into AC power. 1. Your Existing Inverter Is Not Hybrid.

### Should I buy an inverter-less battery?

You can purchase an inverter-less battery if you already have a hybrid inverter installed in your solar system, otherwise you can buy a battery that comes with its own dedicated inverter. 3. Your Inverter Is Outdated or Nearing the End of Its Lifespan.

### Will a string inverter work with a battery?

If your current system uses a standard string inverter, it won't be compatible with a battery. A standard inverter only manages power conversion from panels, not battery storage. In this case, you'll need a dedicated battery inverter as well as your solar inverter. 2. Your Battery Requires a Different Inverter Type
