

# Eastern European photovoltaic container 30kWh

## Overview

---

Does Europe need a solar PV system?

Europe relies on solar photovoltaic (PV) as one of the main energy sources in its climate roadmap. Europe has been a pioneer and leader in PV production, and the installation targets are continually increasing via Renewable Energy Directive revisions.

Does Europe still produce PV panels?

Europe's share in the global production market of PV panels fell from over 30% in 2010 to less than 5% today. The European region still has several production sites located in industrial clusters, offering logistical advantages and proximity to customers.

Can the EU build its energy future on PV products?

The European Union (EU) is not willing to build its energy future on products without ensuring their continued reliability and availability. One of the main enablers, a pillar of the US strategy of the Inflation Reduction Act (IRA), is to reshore a strategic share of PV manufacturing capacities.

What is the European solar energy strategy 38?

The European Solar Energy Strategy 38 assumes that covering progressively a third to half of the annual PV installation demand satisfies strategic security criteria. The recent European NZIA settled on a political target of 40% of local manufacturing.
