## Overview

---

What is an emergency power supply?

An emergency power supply is not a permanent replacement for energy from the public grid. It is merely a temporary backup supply for emergencies. The technology steps in when the primary power supply fails and can compensate for this for a certain period of time, depending on the performance and number of gensets and fuel supplies used.

What is an emergency power system?

**Safety and Independence:** Emergency power systems are often dedicated to supporting life safety systems, including emergency lighting for egress, fire pumps, sprinkler systems, and fire alarm systems, ensuring that these critical functions remain operational during a power outage.

What is an immediate response emergency backup power system?

Immediate response emergency backup power systems are designed to activate rapidly, typically within a few milliseconds, to provide uninterrupted power supply during an outage. These systems are crucial for life safety and maintaining critical operations that cannot tolerate any downtime.

Are battery energy storage systems effective?

Battery energy storage systems are particularly effective in these scenarios due to their swift response, environmental benefits, and efficiency. Whereas delayed response systems maintain essential functions and comfort during outages, decreasing the urgency for uninterrupted power supply.
