

Energy storage cooling costs

Overview

How much does the energy storage system cost?

The energy storage system is a 4MW, 32MWh NaS battery consisting of 80 modules, each weighing 3 600 kg. The total cost of the battery system was USD 25 million and included USD 10 million for construction of the building to house the batteries (built by Burns & McDonnell) and the new substation at Alamito Creek.

How much does a cooling system cost?

The price of a cooling system depends on which cooling system you would like to have installed. Air cooling systems cost less than water cooling systems, with upper end air cooling system going from \$50 - \$100.

How much does a gas storage system cost?

Generally speaking, the cost of the gas storage tank is the most expensive part of the entire system. Operation and maintenance costs include energy consumption and equipment maintenance. The current cost of compressed air energy storage systems is between US\$500-1,000/kWh.

How much does a compressed air energy storage system cost?

The current cost of compressed air energy storage systems is between US\$500-1,000/kWh. Supercapacitor energy storage cost: Supercapacitor is a high-power density energy storage device, and its cost is mainly composed of hardware costs, including equipment such as capacitors and control systems.
