# Energy storage inverter life

## Overview

How long do inverters last?

Under normal use and maintenance conditions, the service life of an inverter is usually between 5~15 years. Household inverters: If the operating environment is good and the loads are properly matched, they can usually reach 10~15 years of service life.

How long does a topbull inverter last?

If you are considering replacing your old equipment or building a new energy system, Topbull inverters are a reliable upgrade option. A good quality home inverter will be stable for 10-15 years, while a high load commercial system may need to be replaced between 5 and 10 years.

Why should you upgrade your inverter?

When the inverter is aging or the system is being upgraded, choosing a new model with higher efficiency and intelligence not only prolongs the life of the system, but also optimizes the overall energy management capability. Click here to learn about Topbull 2000W, 3000W and 4000W upgraded inverters.

How does power margin affect the life of an inverter?

When the inverter is running under full load or overload for a long period of time, the components will be under high stress for a long time, which will accelerate the loss and shorten the life span. Therefore, a reasonable power margin has a significant impact on the life of the inverter. 4. Maintenance and Cleaning
