

Exchange on Smart Photovoltaic Energy Storage Containers Used in Wastewater Treatment Plants in Thailand

Overview

Can photovoltaic conversion of solar energy be used in wastewater treatment?

The application of photovoltaic conversion of solar energy in wastewater treatment is described^[1] and the research progress of photovoltaic conversion in electrooxidation system^[2] reverse osmosis process^[3] electrocoagulation process^[4] aeration equipment^[5] electroflocculation technology and fenton technology is reviewed.

Are solar photocatalytic wastewater treatment plants environmentally friendly?

There do exist very few medium scale solar photocatalytic wastewater treatment plants which are environment friendly compared to the existing conventional systems. Treatment of wastewater using solar energy reduces the use of conventional power there by reduces emission of GHG.

Can photothermal carriers improve the efficiency of biological wastewater treatment?

Sun and colleagues developed photothermal carriers to increase the efficiency of biological wastewater treatment at cold ambient temperatures^[4]. The photothermal carriers on the surface of the bioreactor convert solar energy into thermal energy, elevating the local temperature.

What is the difference between solar energy and wastewater treatment plant?

The solar Energy faces the drawback to treat wastewater only during day time, whereas wastewater treatment plants are underperformed during night. Need for energy storage systems increases the overall cost of the WWT plant.
