

Ground mounted solar panels

Overview

Ground-mounted solar panels are free-standing solar arrays installed at the ground level rather than on the rooftop and are supported with a pole or a metal frame. How do I install ground-mounted solar panels?

When it's time to fit your ground-mounted solar panels, installers will first need to dig a trench – around 450mm deep – from the solar panels to your property. This is to fit the cable that will transmit power from your array to your home's electricity supply.

Do ground-mounted solar panels work?

Ground-mounted solar panels work particularly well for properties with lots of open space. Like rooftop systems, ground-mounted solar energy systems harness the sun's power through photovoltaic (PV) cells.

How do I maintain my ground-mounted solar panels?

Regular maintenance, including inspection, cleaning, and monitoring, ensures optimal energy production and performance of your ground-mounted solar panels. Solar power systems, or photovoltaic (PV) systems, are promising renewable energy solutions that harness the sun's abundant energy and convert it into electricity.
