

High frequency inverter with integrated inverter control

Overview

What is a high frequency inverter?

In many applications, it is important for an inverter to be lightweight and of a relatively small size. This can be achieved by using a High-Frequency Inverter that involves an isolated DC-DC stage (Voltage Fed Push-Pull/Full Bridge) and the DC-AC section, which provides the AC output.

Which power supply topologies are suitable for a high frequency inverter?

The power supply topologies suitable for the High-Frequency Inverter includes push-pull, half-bridge and the full-bridge converter as the core operation occurs in both the quadrants, thereby, increasing the power handling capability to twice of that of the converters operating in single quadrant (forward and flyback converter).

Are module integrated converters suitable for solar photovoltaic (PV) applications?

This approach is well matched to the requirements of module integrated converters for solar photovoltaic (PV) applications. The topology is based on a series resonant inverter, a high frequency transformer, and a novel half-wave cycloconverter.

Can a microinverter convert low-voltage DC to high voltage AC?

CONCLUSION This paper introduces a microinverter for single-phase PV applications that is suitable for conversion from low-voltage (25-40 V) DC to high voltage AC (e.g. 240 Vrms AC). The topology is based on a full-bridge series resonant inverter, a high-frequency transformer, and a novel half-wave cyclo-converter.
