## Overview

---

What is a 48 volt inverter?

In other words, it is a device that can take current from a bank of batteries (48V) and convert it to the type supplied in the grid to power your appliances and devices. I suggest you use A 24-volt inverter or 36-volt inverter or 48-volt inverter when you need to power appliances over 3000 Watts.

Do you still use Growatt inverter?

I still use the Growatt for PV tracking and battery charge controller, and use its inverter only for more power-hungry tools such as my circular saw, drill press, angle grinder, etc. The Victron Phoenix Inverter 48/1200 delivers 1200VA at 120VAC from 48VDC, with VE.Direct—ideal for efficient, reliable off-grid or backup power use.

How much power does a Phoenix inverter use?

The Phoenix is distinctly efficient, with around 10W standard idle consumption or as low as 1-2w in eco mode. Compared to larger inverters, idle consumption can often be upwards of 100W+. This feature alone sets this unit apart and makes it perfect for running continuous loads throughout a 24hr period with the most efficiency possible.
