

# **How many kilowatts of solar energy are installed**

## Overview

---

How many gigawatts of solar power are there in China?

Only in that last year, installations increased by almost 40 percent. In 2024, cumulative solar PV capacity reached some 886 gigawatts in China alone. Investments in solar photovoltaic energy have grown during the last years and the technology stands out as the most heavily funded renewable energy source.

How much solar power does the world have in 2024?

Image: World Bank. The world reached 2.2TW of cumulative installed solar capacity in 2024, with China alone accounting for 1TW of total operating capacity. This is a headline conclusion from the latest report from the International Energy Agency's Photovoltaic Power Systems Programme (IEA-PVPS), published this week.

How many kilowatts does China have?

Hydropower accounted for 436 million kilowatts, wind power for 521 million kilowatts, solar power for 887 million kilowatts, and biomass power for 46 million kilowatts. Last year was the second year that China's cumulative installed capacity of renewable energy power generation has exceeded 50 percent of the country's total installed capacity.

How much solar capacity did Pakistan add in 2024?

Pakistan added a record 17GW of new solar capacity in 2024. Image: World Bank. The world reached 2.2TW of cumulative installed solar capacity in 2024, with China alone accounting for 1TW of total operating capacity.

## How many kilowatts of solar energy are installed
