# How many watts of rooftop solar power generation per square meter

## Overview

---

How much power can a 100m<sup>2</sup> roof produce?

When panel efficiency reaches 30%, a 100m<sup>2</sup> roof could generate 50,000kWh/year – enough to power 20 average homes. The solar revolution isn't coming; it's already here. Solar panels have become a cornerstone of renewable energy, but many wonder: How much power can a single square meter of solar panels actually produce?

What is solar panel watts per square meter (W/M)?

Solar panel watts per square meter (W/m) measures the power output of a solar panel based on its size. Compare solar panels to see which generates most electricity per square meter. A higher W/m value means a solar panel produces more power from a given area. This can help you determine how many solar panels you need for your energy needs.

How many solar panels can fit on a roof?

To calculate how many panels can fit on your roof, divide your open roof space by 20 square feet (or however large your particular solar panels are). For example, if you have 500 square feet of open, available roof space, that's enough space for about 25 solar panels.

How much electricity can a solar panel generate?

To put this into perspective, if you install 10 square metres of monocrystalline solar panels, you could generate up to 2,200 watts (2.2 kW) of electricity, sufficient to power basic household appliances. The solar panel price varies based on type, size, and efficiency. Here's a general pricing guide in India:
