# How much does an energy storage cabinet cost per watt-hour

## Overview

---

How much does a battery energy storage system cost?

In 2025, the typical cost of commercial lithium battery energy storage systems, including the battery, battery management system (BMS), inverter (PCS), and installation, ranges from \$280 to \$580 per kWh. Larger systems (100 kWh or more) can cost between \$180 to \$300 per kWh. How does battery chemistry affect the cost of energy storage systems?

How much does a commercial lithium battery energy storage system cost?

In 2025, the typical cost of a commercial lithium battery energy storage system, which includes the battery, battery management system (BMS), inverter (PCS), and installation, is in the following range: \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region depending on economic levels.

How to calculate the cost of energy storage per kWh?

The cost of energy storage per kWh can be calculated using the formula: Total cost of the project / Total energy capacity. For example, if the total cost of the project is \$1000 and the total energy capacity is 69.5 kWh, then the energy storage cost for 1 kWh is  $\$1000 / 69.5 \text{ kWh} \approx \$14.40/\text{kWh}$ .

How much does commercial battery storage cost?

For large containerized systems (e.g., 100 kWh or more), the cost can drop to \$180 - \$300 per kWh. A standard 100 kWh system can cost between \$25,000 and \$50,000, depending on the components and complexity. What are the costs of commercial battery storage?
