

# How to connect solar cell modules in series

## Overview

---

Sometimes the system voltage required for a power plant is much higher than what a single PV module can produce. In such cases, N-number of PV modules is connected in series to deliver the required volt.

How do I wire solar panels in series?

It should be designed to shut down during power outages in the grid to protect your system. Time to connect the modules together! To wire solar panels in series, you'll connect the positive (+) terminal of one panel to the negative (-) terminal of the next panel, and so on until all panels are connected.

What is a series connection solar panel?

Definition: In a series connection, solar panels are linked end-to-end, where the positive terminal of one panel connects to the negative of the next. Effect on Voltage: Adds up (e.g., two 12V panels = 24V total). Effect on Current (Amps): Stays the same as a single panel. Best for increasing system voltage.

How do you connect a solar panel?

Solar panel series connection diagram with five panels, showing positive to negative wiring. Connect the positive MC4 connector of Panel 1 to the negative MC4 of Panel 2. Repeat the process for additional panels. Connect the remaining open ends (Panel 1 negative and last panel positive) to your charge controller or inverter.

What happens when a solar panel is wired in series?

When you connect the positive terminal of one panel to the negative terminal of another panel, you create a series connection. When you connect two or more solar panels like this, it becomes a PV source circuit. When solar panels are wired in series, the voltage of the panels adds together, but the amperage remains the same.
