

# **Indonesia Surabaya rural glass solar sun room**

## Overview

---

What is the average solar energy output in Surabaya Indonesia?

Average 5.58kWh/day in Autumn. Average 5.62kWh/day in Winter. Average 5.88kWh/day in Spring. To maximize your solar PV system's energy output in Surabaya, Indonesia (Lat/Long -7.2484, 112.7419) throughout the year, you should tilt your panels at an angle of 8° North for fixed panel installations.

How should solar panels be positioned in Surabaya?

In Autumn, tilt panels to 14° facing North for maximum generation. During Winter, adjust your solar panels to a 23° angle towards the North for optimal energy production. Lastly, in Spring, position your panels at a 2° angle facing North to capture the most solar energy in Surabaya, Indonesia.

Is Surabaya suitable for large-scale solar PV installations?

However, considering the dense urban development in Surabaya city itself, large-scale solar PV installations might be challenging due to space constraints. Areas surrounding Surabaya like Sidoarjo and Gresik could be more suitable for large-scale solar PV installations due to more available land.

Is Surabaya a good location for solar power generation?

Surabaya, East Java, Indonesia, located in the tropics, is a very suitable location for solar power generation throughout the year. This is due to its consistent sunlight exposure and tropical climate characterized by wet and dry seasons.
