What does a 24V battery inverter do?

A 24V battery inverter is a device that converts 24V battery output (DC, or direct current) into 230V mains output required for domestic appliances (AC, or alternating current). It can also function as a backup / emergency power source in case of power cuts.

How much power does a 24V inverter consume?

A good sized 24V inverter could use about as much power just being on as your lights do. If the lights consume 45 watts and run for 12 hours a day, the total power usage would be $45 \text{ watts} \times 12 \text{ hours} = 540 \text{ watts}$. The battery power required for losses plus the load could double that. The lights themselves may be DC, using a small transformer (wall wart) to go from 120Vac to (likely) 12Vdc.

What is a 1000W solar power inverter?

1000W (1500VA) rated capacity off grid pure sine wave solar power inverter, built-in solar MPPT charge controller 30A, can charge for battery and convert DC 24V to AC 220/240V.
