## Inverter and battery box

## Overview

---

What is an inverter battery?

The inverter battery and inverter cables are usually connected to the power connection of the home. An inverter battery for home can be any rechargeable or secondary or storage battery (electrochemical power source) like a lead-acid battery, nickel-cadmium battery or Li-ion battery.

Which inverter is compatible with the battery-box HVE?

The Battery-Box HVE is paired with two newly launched BYD Power-Box inverters: · Power-Box SH3/3.7/4.6/5/6K (single-phase): This inverter supports a 35A battery charging and discharging current, providing a 200% peak output power, seamless grid switching, and 97.7% maximum efficiency.

What happens if a battery is not connected to an inverter?

With the correct connection, the energy stored in the battery can be smoothly transferred to the inverter and converted into stable AC power for the power supply equipment, maximizing system efficiency. Improper connections, such as a battery voltage that does not match the inverter's input requirements, may result in less efficient power transfer.

Do inverters need to be connected to batteries?

Connecting inverters to batteries is an important part of an off-grid power solution or backup power system, and the right connections ensure that the system runs efficiently.
