

Inverter solar High Frequency

Overview

What is a low frequency solar inverter?

The low frequency solar inverter firstly turns the DC into IF low-voltage AC, and then boosts it into 220V, 50Hz AC for the load through the IF transformer. High frequency inverters and low frequency inverters are two common types of inverters with distinct differences in their application, operating principles, and characteristics:.

What is a high frequency inverter?

A high frequency inverter is a type of UPS (Uninterruptible Power Supply) that uses a microprocessor as its process control center. It employs software programming to control its operation, unlike traditional analog circuits.

Should you choose a low frequency or high frequency inverter?

For applications that require high power quality and are sensitive to the electromagnetic environment, you can choose an Low Frequency inverter; while for applications that require portability, high efficiency and fast response, High frequency inverters are more advantageous.

What is a frequency inverter?

A frequency inverter, also known as a variable frequency drive (VFD), is a device that converts fixed frequency AC to variable frequency AC. It is based on traditional principles of analog circuit design and uses components like thyristors (SCR), IGBTs, and transformers. Its operating frequency can be adjusted, typically from 0 to 50Hz.
