

Irish companies using flow batteries

Overview

What are the current commercial flow battery chemistries?

Current commercial flow batteries are based on vanadium- and zinc-based flow battery chemistries. Typical flow battery chemistries include all vanadium, iron-chromium, zinc-bromine, zinc-cerium, and zinc-ion.

What are flow batteries used for?

Flow batteries help create a more stable grid and reduce grid congestion and fill renewable energy production shortfalls for asset owners. Global R&D is fueling the development of flow battery chemistry by significantly enabling higher energy density electrodes and also extending flow battery applications.

What is the flow batteries tour?

Discover the Flow Batteries Tour to learn about different flow battery projects being undertaken from Flow Batteries Europe members in Europe and beyond. The examples showcase how flow batteries are becoming readily available on the market and can really contribute to the energy transition.

How will the flow battery market grow?

The flow battery market is expected to grow significantly as the share of renewables increases in the primary energy mix. Despite their higher CapEx cost compared to lithium-ion batteries, flow batteries are expected to be used extensively for both front-of-the-meter and behind-the-meter applications in the next several years.
