

Jordan Site Energy solar Site Energy

Overview

What percentage of Jordan's electricity is solar?

More than 20 percent of the electricity grid in Jordan is powered by solar or wind energy, with a target of 31% by 2030. Exceeding this percentage will be challenging for Jordan unless storage solutions are implemented.

Are grid-connected PV systems feasible in Jordan?

El Tous (2013) [126] explored the feasibility of residential grid-connected PV systems under the Jordanian net metering renewable energy law, while El-Karmi and Abu-Shikhah (2014) [127] and El-Karmi and Abu-Shikhah (2013) [128] investigated the role of financial and economic incentives in promoting renewable energy in Jordan.

Is Jordan a good place for solar energy?

They reported that because Jordan is located in the world's solar belt, it receives higher average solar radiation amounts, ranging between 4 and 8 kW h/m² /day, which suggests a capacity of 1400–2300 GW h yearly. As a result, Jordan has a huge potential for solar energy, enabling a large-scale installation of PV projects.

Are PV systems the most cost-effective option for electricity generation in Jordan?

They found that PV systems are Jordan's most cost-effective option for electricity generation. They studied and contributed to different aspects of renewable energy in Jordan, including technological solutions, potential sources, policies, economic viability, and challenges.
