## Overview

---

What is a solar glass substrate?

Manufacturers of crystalline silicon solar modules apply glass substrates on the front side of the solar modules. This front glass will either be a patterned glass or a glass with anti-reflective coating (AR). As in all other glass manufacturing processes, solar glass substrates are subject to defects during production.

What is a solar glass heat-treating system?

Solar glass heat-treating systems designed with our collective future in mind. Most solar technologies use specialized glass substrates in some way. The glass must meet the rigid specifications needed by solar products perform as specified. Glasstech provides precisely bent or curved glass equipment solutions for concentrating solar power.

What G-value should a Photovoltaic Glass have?

Photovoltaic glass can be customized to achieve a solar factor between 6% and 41%. A low g-value is desirable to prevent overheating, especially in warm climates, as it prevents the interior temperature from rising too high due to the greenhouse effect.

How curved glass is used for concentrating solar power photovoltaic (PV)?

The glass must meet the rigid specifications needed by solar products perform as specified. Glasstech provides precisely bent or curved glass equipment solutions for concentrating solar power photovoltaic (PV) market. CPV electricity production. In most cases, the glass substrate is low-iron and the bent product is silvered or coated by the
