Laayoune home UPS uninterruptible power supply

Overview

What is an uninterruptible power supply (UPS)?

Uninterruptible Power Supply (UPS) | Schneider Electric Hong Kong, China. An Uninterruptible Power Supply system provides emergency power when the main source fails, using batteries to ensure a continuous supply. It conditions incoming power, protecting equipment from fluctuations. We offer various UPS power supply types for different needs.

How does an ups work?

A UPS stores energy in internal batteries and converts it into AC power the moment your main power fails. Depending on the model, it might activate instantly (standby UPS), regulate voltage continuously (line-interactive), or offer full isolation from the power grid by double-converting energy (online UPS).

Why should you use UPS management software?

It protects servers, storage systems, networking equipment from power quality issues. UPS management software enhances UPS functionality and efficiency, providing centralized control, monitoring, and automation for proactive power management. What are the benefits of using Uninterruptible Power Supply (UPS)?

What is a standby UPS?

A Standby UPS is a battery backup system where the battery is charged by the main power supply and connected to an inverter through a transfer switch. As shown in the block diagram of Figure 1, during normal operation, the system runs on primary power while the inverter remains inactive.
