## Overview

---

What is a Commercial electrolyte for vanadium flow batteries?

Commercial electrolyte for vanadium flow batteries is modified by dilution with sulfuric and phosphoric acid so that series of electrolytes with total vanadium, total sulfate, and phosphate concentrations in the range from 1.4 to 1.7 m, 3.8 to 4.7 m, and 0.05 to 0.1 m, respectively, are prepared.

What is all-vanadium redox flow battery (VRFB)?

All-vanadium redox flow battery (VRFB), as a large energy storage battery, has aroused great concern of scholars at home and abroad. The electrolyte, as the active material of VRFB, has been the research focus. The preparation technology of electrolyte is an extremely important part of VRFB, and it is the key to commercial application of VRFB.

Can vanadium redox flow battery electrolytes be used in large-scale applications?

The preparation technology of vanadium redox flow battery electrolytes directly influences their potential for large-scale applications.

What is a commercial vanadium electrolyte?

Currently, commercial vanadium electrolytes are primarily H<sub>2</sub>SO<sub>4</sub> (2.5–3.5 mol/L) solutions dissolving 1.5–2 mol/L vanadium, with energy densities typically around 25 Wh/L, significantly lower than Zn mixed flow batteries, which can achieve energy densities up to 70 Wh/L [10, 20].
