

Metal clad switchgear factory in Honduras

Overview

What is a metalclad switchgear?

Metalclad Switchgear (5kV to 38kV): Our metalclad switchgear is suitable for both indoor and outdoor installations, providing reliable power distribution in harsh environments.

What is a custom manufactured switchgear?

Our custom manufactured switchgear solutions are designed to meet companies' specific power distribution equipment needs, and we are known as the preferred choice among custom switchgear manufacturers. We offer a wide range of stainless-steel, metal-enclosed, and metal-clad switchgear, as well as switchboards ranging from 208V to 38kV.

Does metal-clad switchgear need a breaker cell?

Personnel working on metal-clad switchgear still have to use care when working in a breaker cell. This is due to the presence of control power that can come from multiple sources, as well as any main bus connected PT/VT's. Below are images showing the major parts of metal-clad equipment.

What is the difference between metal-enclosed and metal-clad switchgear?

Metal-enclosed switchgear is typically less expensive, has a smaller footprint, and can offer a wide variety of bussing and connections options compared to metal-clad switchgear. Above is a typical outdoor, 15kV switch lineup with an incoming and bus transition section. The main switch energizes the incoming section regardless of its position.
