

# Mobile Base Station Power Module

## Overview

---

What is the role of a mobile base station?

A mobile base station, also known as a (tower), is what links mobile phones to a wireless carrier's network. It is a fixed station in a cellular wireless network and provides local coverage (an area where mobile phones will work) for a wireless network. A base station functions as the connection point between mobile phones and the wireless carrier's network.

What power devices does St offer?

ST provides a complete power device portfolio, including IGBTs, thyristors, power rectifiers and MOSFETs, power modules and system-in-package (SiP) solutions to make mobile base stations more energy-efficient. Our broad range of inertial and environmental MEMS sensors can also enhance the functionality of base transceiver stations.

What is a baseband unit (BBU)?

The baseband unit (BBU) is a crucial component in mobile base stations, handling tasks like signal processing, resource allocation, and protocol management to ensure efficient communication between mobile devices and networks. It also ensures security through encryption and manages interference and network operations.
