

# Moldova inverter grid connection standard

## Overview

---

Does Moldova have a power grid?

Moldova's electricity grid was predominantly built in the time of the Soviet Union, making it relatively old and inefficient. It is synchronously interconnected with Ukraine's Integrated Power System (IPS) and, in turn, Russia's Unified Power System (UPS) in the northern and south-eastern parts of the grid.

Does Moldova have a synchronous electricity system?

While there are transmission lines connecting Moldova's electricity to Romania, the grid cannot operate synchronously with Romania's electricity system, which is part of ENTSO-E's Continental Europe Synchronous Area and has stricter regulations for the technical operation of its network.

Can grid-connected PV inverters improve utility grid stability?

Grid-connected PV inverters have traditionally been thought as active power sources with an emphasis on maximizing power extraction from the PV modules. While maximizing power transfer remains a top priority, utility grid stability is now widely acknowledged to benefit from several auxiliary services that grid-connected PV inverters may offer.

Do inverters & converters meet grid interconnection requirements?

With our deep expertise in more than 50 grid interconnection standards, we ensure that your inverters and converters meet grid interconnection requirements, including reactive power control, low-voltage ride-through (LVRT), and frequency response capabilities.
