Can polymeric membranes be used in vanadium redox flow batteries (VRB)?

This review on the various approaches to prepare polymeric membranes for the application in Vanadium Redox Flow Batteries (VRB) reveals various factors which should be considered when developing new membranes materials with or without the addition of non-polymeric materials.

How does vanadium permeability affect energy storage time?

Vanadium permeability Diffusion of the V ions from one half-cell to the other leads to discharge of the battery and, thus, determines the energy storage time of the battery. Extensive research has shown that the cationic membranes are susceptible to V permeability due to their attraction of the V species.
