Overview

What is a grid-connected battery system?

The use of energy stored in a grid-connected battery system to meet on-site energy demands, reducing the reliance on the external grid. The gradual loss of stored energy in a battery over time due to internal chemical reactions, even when it is not connected to a load or in use.

What types of battery technologies are being developed for grid-scale energy storage?

In this Review, we describe BESTs being developed for grid-scale energy storage, including high-energy, aqueous, redox flow, high-temperature and gas batteries. Battery technologies support various power system services, including providing grid support services and preventing curtailment.

Are battery energy-storage technologies necessary for grid-scale energy storage?

The rise in renewable energy utilization is increasing demand for battery energy-storage technologies (BESTs). BESTs based on lithium-ion batteries are being developed and deployed. However, this technology alone does not meet all the requirements for grid-scale energy storage.

Can lithium-ion batteries be recycled for enabling a circular economy?

A review of lithium-ion battery recycling for enabling a circular economy. J. Power Sources 630, 236157 (2025). Ma, R. et al. Pathway decisions for reuse and recycling of retired lithium-ion batteries considering economic and environmental functions.
