

# **Off-grid and on-grid integrated inverter**

## Overview

---

What is the difference between a solar inverter and an off-grid?

On-grid solar inverters are tailored for grid-connected renewable energy systems, while off-grid solar inverters, such as the 2000W off-grid solar inverter charger, cater to standalone or off-grid applications with battery storage.

What is an off-grid hybrid inverter?

Commonly known as an off-grid hybrid inverter, it combines solar + battery + optional grid power, ensuring uninterrupted energy supply. Ideal for users in regions with occasional grid access who prioritize solar autonomy but value backup flexibility.

What is an on-grid solar inverter?

1. On-Grid Solar Inverter An on-grid solar inverter connects directly to the utility grid. It synchronizes the solar system with grid electricity and exports excess energy. On-grid systems are cost-effective. They reduce electricity bills and enable net metering, where users get credited for the energy they supply to the grid.

How do off-grid inverters work?

Off-grid inverters operate independently from the utility grid. They rely on solar panels and batteries to generate and store electricity, providing energy autonomy even in remote areas. DC power from panels is stored in batteries, then converted to AC as needed to power devices.
