

# Off-grid pricing of mobile energy storage containers for US airports

## Overview

---

For these containerized systems, starting at roughly 100 kWh and extending into the multi-MWh range, fully installed costs often fall in the USD \$180-\$320 per kWh range. What is a mobile energy storage system?

On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions. Maximum safety utilizing the safe type of LFP battery (LiFePO<sub>4</sub>) combined with an intelligent 3-level battery management system (BMS);.

What is energy storage container?

SCU uses standard battery modules, PCS modules, BMS, EMS, and other systems to form standard containers to build large-scale grid-side energy storage projects.

How can a mobile energy storage system help a construction site?

Integrate solar, storage, and charging stations to provide more green and low-carbon energy. On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions.

What is a battery energy storage system?

Battery Energy Storage Systems (BESS) enhance energy security for airports and transportation hubs by providing reliable backup power, reducing operational costs, and supporting sustainability initiatives. Learn how integrating BESS can improve resilience and efficiency in critical infrastructure.
