

Off-solar container grid inverter purchased by the customer

Overview

We are offering mini renewable power stations in a Off-Grid shipping Container ready to be deployed worldwide. These include solar PV panels and mountings.

What is an off-grid solar inverter?

An off-grid solar inverter is a device that converts the direct current output by solar panels into alternating current. It is not connected to the power grid and independently supplies power to the load. This type of inverter is suitable for remote areas with unstable power supply or no access to the power grid.

Can an off-grid inverter make or break your home energy system?

The right off-grid inverter can make or break your home energy system. Whether you're building a remote homestead, setting up an RV, or preparing for grid instability, choosing a reliable, efficient, and safe inverter is critical. In 2025, with more advanced features and integrated technologies, there's a model to suit every home and budget.

How do I Choose an off-grid inverter?

When selecting an off-grid inverter, it's important to consider whether it can directly integrate with your solar panel system. Some solar inverters come with a built-in MPPT (Maximum Power Point Tracking) solar charge controller, which optimizes the energy harvested from your solar panels and eliminates the need for a separate controller.

What is a grid connected solar inverter?

This type of inverter is suitable for remote areas with unstable power supply or no access to the power grid. A grid-connected solar inverter is a device that converts the direct current output by solar panels into alternating current and directly supplies it to the power grid.
