

# Operation and maintenance costs of energy storage power stations

## Overview

---

The annual operation and maintenance costs for large-scale industrial-grade EES power stations and commercial and industrial EES are \$16/kW-year and \$27/kW-year, respectively (Chen et al., 2023; He et al., 2020). Should shared energy storage power stations be allocated?

This allocation method, although straightforward for the overall system to distribute the costs associated with the shared energy storage power station to each renewable energy power station involved, does not take into account the practical use rates of the shared energy storage services and may appear unjust to stakeholders.

What is energy storage cost?

Energy storage cost is an important parameter that determines the application of energy storage technologies and the scale of industrial development. The full life cycle cost of an energy storage power station can be divided into installation cost and operating cost.

How much does a gas storage system cost?

Generally speaking, the cost of the gas storage tank is the most expensive part of the entire system. Operation and maintenance costs include energy consumption and equipment maintenance. The current cost of compressed air energy storage systems is between US\$500-1,000/kWh.

What is a shared energy storage-assisted power generation system?

3. Combined operational and cost allocation models for shared energy storage-assisted power generation systems Here, the power generation system comprises a collection of renewable energy power stations ( $n = 1, 2, \dots, n, \dots, N$ ), specifically wind power plants and photovoltaic power plants, which are connected to a shared energy storage power station.
