

# Outdoor power cycle charging

## Overview

---

How does solar charging work?

For solar charging, we connected compatible panels to each station in different positions and times of day. Morning sun (8-10am) and late afternoon sun (4-6pm) produced about half the charging power of midday sun. Position matters too – panels facing directly at the sun charged stations 30% faster than poorly angled panels.

Do portable power stations make camping better?

A good portable power station makes camping better. These devices power lights, phones, and small appliances when you're outdoors. We spent three months testing power stations to find the best portable power stations for camping. We tested 30 portable power stations over 12 camping trips.

How does battery capacity affect your camping experience?

Battery capacity directly impacts your camping experience. For portable power stations, capacity is measured in watt-hours (Wh), telling you how much energy the unit stores. Weekend adventures typically need 200-300Wh for smartphone charging and LED lighting.

Is solar charging a good idea?

Solar charging delivers true off-grid independence for extended outdoor stays. For trips lasting more than three days, solar charging becomes essential. Look for compatibility with at least 100W solar input, with 200W capabilities offering significantly improved recharge times.
